II Combine Drugs

- Prepare reservoir plates first (run I)
- All files in notes_II

vs a)

This version is to create all drug combinations. If that is the intention this script is substantially more efficient regarding tips and waste.

vs b)

This script is intendet to create one combination plate (e.g. to repeat a combination).

Setup

- Turn off Heat in StoreX (see below)
- Fill Incubator with reservoir plates and reservoirs according to StoreX.csv
- Place tipbox according to locations.csv

Run

- Start script.
- After adding each drug (takes 20-35 min) you are prompted to replace the tip block.

Turn of heat StoreX

- Go to evoware
  - Configure
    - Device Information
      - Select Storex
      - Press Settings
        - Set to 20 Degree.
  - save and Exit
- reboot StoreX, Robot and PC
